

I want to learn more on HTML. How can I go about it?

As I had informed earlier, we have only covered the basics of HTML as part of this tutorial. However, do note that the concepts that you have just learned are enough for you to build your IoT Projects. In past, we have heard the students say that we did not cover all the aspects of HTML and web development. However, teaching HTML itself is a full-fledged training course and hence it is out of the bounds of our IoT training to cover it all.

However, if you want to learn more on HTML we recommend you to check out this tutorial which is free of cost <https://www.w3schools.com/html> (<https://www.w3schools.com/html>). It will help you continue your study of HTML programming and become an expert in HTML.

Q. What is <p> tage used for?

The <p> tag is for paragraph. It is used for formatting the text in HTML page into a paragraph.

Q. What is the range of the output values of the ADC on the Bolt module?

The ADC on the Bolt module can generate an output in the range of 0 to 1024.

A value of 0 corresponds to a voltage of 0V on the analog input pin a0.

A value of 1024 corresponds to a voltage of 1V on the analog input pin a0.

Q. what is
 tag used for?

The
 Tag is used to display a new line in the html view.

Q. how to make some text clored?

Just use the `<style></style>` tags to encompass the text you want in a different color and mark the style tag with the color you want.

Example

This text is in white`<style text="#0000FF>`while this text is in blue`</style>`

Q. what is `<a>` tag used for??

a tag is called anchor tag and anchor tag is used for creating a link.

For example :

```
<a href="https://www.facebook.com">My Facebook</a>
```

When you open the above code in chrome, you can only see text **My facebook** and when you click on the text, you will be redirected to <https://www.facebook.com>
