

Cloud, APIs and Alerts > Interfacing Sensor over VPS

Assignment

Below is an assignment as part of the training. This assignment is for self-study and won't be counted for evaluation. Hence, you need not submit the assignment. You can, however, document your answer in your personal notebook and save it for your future reference. There will be no submission of this assignment.

Write a code which will send an email as well as SMS when light falls on LDR connected to Bolt.

Note: You just have to change the circuit connection, replace the temperature sensor with LDR and in the code, you have to set the threshold value according to the light intensi
